

A project brief. Rendered from HTML.

A small, fictional document showing typography, structured content and a styled table.

Synthetic example

Created for this portfolio. No customer or project records are used.

01 / The brief

Example Studio needs a concise one-page handover that can be read as a PDF or shared as an image. The layout brings a short introduction, a structured table and delivery notes into one document.

02 / Deliverables

Item	Purpose	Format
Project brief	Readable, selectable document text	PDF
Page preview	A raster view of the same layout	PNG
Source template	Fictional content and presentation	HTML + CSS

03 / From one layout

The template is passed to Docify, laid out once, and emitted as PDF and PNG. This sample demonstrates that render; it is not a customer deliverable or a performance benchmark.
